

BobCAD-CAM Now in the UK

CNC Applications Ltd, based in Henley in Arden, Warwickshire have recently become the agent for BobCAD-CAM sales, support and training in the UK.

BobCAD-CAM has over 30 years experience developing powerful and easy to use CAD-CAM software. With over 150,000 licenses worldwide, it was voted **Most Popular Tier-Priced Modular CAM Software in 2016**.

These modules include:

- CAD
- Milling (2.5 / 3 / 4 / 5 Axis)
- Turning
- MillTurn
- RouterLaser / Plasma / Waterjet
- Wire EDM
- Artistic / Sign Making
- Nesting

These CAD-CAM modules save users a lot of time and money. Quickly draw or import the part, apply the cutting toolpaths and post the code direct to the CNC machine.

Mike Jerdin, Technical Director for CNC Applications said: *“The key to the customer using the product and getting the most from it is support. We aim to offer unrivalled telephone support, post processor development and customer training. Our number one focus is support here in the UK. Training can be at your premises, tailored to meet your exact needs, using your parts.”*

Previously, BobCAD-CAM software was sold direct from the USA and also partially supported from the USA. With the time zone difference, it benefits users in the UK to have a local rep that they can work with. Mike added: *“Now BobCAD-CAM customers can pick up the phone at 9:00am and get support from dedicated BobCAD specialists.”*

Along with BobCAD-CAM, CNC Applications will also be dealing with sales and support for BobCAM, the Gold Certified add-in for SOLIDWORKS™, allowing users to generate toolpaths in the familiar surroundings of SOLIDWORKS. CNC Applications have now also become a SOLIDWORKS OEM reseller.

Each month CNC Applications will be holding a 3-day training seminar around the country, where BobCAD-CAM users can gain knowledge of the product and increase their

productivity. The courses will be aimed at those looking to get a good introduction to the system or simply a refresher.

If you are struggling for time or resources to program your parts, then we can help.
